

Exercise Sheet 6

- 1) Search on the internet for other sorting algorithm such as Merge Sort or Insertion Sort. Pick one of them and implement it in JavaScript solving the same problem as the one in the last video.
- 2) Give three examples of real life situations where you would need to sort a list.

Answers:

- 1) Search on google for an answer 😊
- 2) Not the only answers: to order a list of names for a class list, to order a list of grades to know the highest and lowest mark, or to easily determine the mean/median of a list of numbers for statistical purposes.
